

Sweetliner

For the finest details on the cake

In addition to the trusted piping bags, One Way Plastics introduces a new innovative product. 'Who has the skill nowadays to apply a perfect straight line on a cake with a paper cone piping bag?'. That is a question many master pastry chefs ask themselves. One Way Plastics provides the solution: the Sweetliner. This small piping bag with extremely flexible firm-grip multi-layer film in combination with a lockable nozzle allows nearly everyone to write 'calligraphy' on cakes.

The nozzle falls automatically into place and is therefore ready-made in a few seconds. The Sweetliner can be filled in advance, stored in the refrigerator and can be warmed up in the microwave or au bain-marie. Because the Sweetliner can be manipulated as easily as a pen, not only the professional, but also the non-professional is capable to create the most beautiful and finest details with fluid fillings. The unique Sweetliner is patent pending.
